Information & Communication Technology

- ❖ Audience appreciation means considering the audience when designing ICT solutions (e.g., websites, presentations).
- ❖ Two key contexts:
 - Preparing a presentation using presentation software.
 - Developing a website for a specific audience.
- ❖ Both follow similar steps to ensure user needs are met.

Consider:

- ❖ Age of audience – Young children respond differently than adults.
- ❖ Audience experience – Business executives vs. school children.
- ❖ Audience expectations – E.g., restaurant ads: older adults vs. students expect different things.
- ❖ Audience knowledge – Use of technical terms should match audience's understanding.

Finding Out About the Audience:

- ❖ Conduct interviews with a cross-section of the target group.
- ❖ Use questionnaires or online surveys to learn about interests, preferences, background.
- ❖ Analyze to identify trends.
- ❖ Adapt the solution to meet the audience's full expectations.

- ❖ Language used – Avoid jargon for general audience; use technical terms only with experts.
- ❖ Multimedia used – Use sound, video, animation but avoid overuse.
- ❖ Length of presentation – Short and engaging for younger audiences.
- ❖ Interactivity – Encourage participation but respect those who may not want to.
- ❖ Examples used – Choose relatable, inclusive examples.

When creating a website, consider:

- Age range – Children prefer animations and colors; adults focus on usability.
- Income – Product offerings should match financial capabilities.
- Interests – Content should reflect hobbies/preferences (e.g., music genres).
- Disabilities – Use large fonts, simple text, sound, and contrast for accessibility.

Needs Based on Age:

- Young children Bright colors, animation, minimal text, large fonts, simple UI, games.
- Adults & older children Interesting content, text + images, proper language level, bullet points.
- Older people High contrast, large fonts, easy navigation, limited tech terms.

Why Consider Audience Needs?

- ❖ Ensure accessibility for all, including people with disabilities.
- ❖ Avoid complex language for children/ESL users.
- ❖ Retain user attention and engagement.
- ❖ Aesthetic, user-friendly design increases satisfaction.
- ❖ Reduces frustration and confusion when navigating the solution.

M25_QP12_Q11

A company is developing a piece of software. The company needs to have a clear sense of audience for its software so that it will be suitable for the users.

One of the characteristics that needs to be considered is the expectations of the user.

- (a) **State** two other characteristics that need to be considered.

.....
.....[2]

Question	Answer	Marks
11(a)	Two from: The age of the target group The experience of the audience The knowledge of the audience	2

It is illegal to:

- ❖ Copy and share/sell software.
- ❖ Use networked/multi-device software without a license.
- ❖ Use source code from copyrighted software in your own project.
- ❖ Rent software without permission.
- ❖ Use a brand name of copyrighted software without agreement.

- ❖ **Piracy** = Illegal copying and distribution of software.

Methods to protect against piracy include:

- ❖ **Product keys** – Entered during installation.
- ❖ **License agreements** – Must be accepted before installation.
- ❖ **Holograms** – Indicate authenticity on packaging.
- ❖ **CD/DVD checks** – Software may only work if the original disc is in the drive.
- ❖ **Dongles** – USB devices that must be plugged in to use the software.

Anti-Piracy Enforcement

- ❖ Organizations like
 - Federation Against Software Theft FAST (UK),
 - International Intellectual Property Alliance IIPA (USA),
 - Japan Intellectual Property Association JIPA (Japan)
- ❖ All prosecute copyright violations.
- ❖ Legal penalties for piracy are severe (e.g., \$100,000 fine to eBay traders selling illegal software).

M25_QP12_Q11

A company is developing a piece of software. The company needs to have a clear sense of audience for its software so that it will be suitable for the users.

- (b)** The developers are concerned about their software being pirated.

Describe three methods the company could use to help prevent software piracy.

[6]

Question	Answer	Marks
11(b)	One mark for the method and one mark for the description Legal protection Notices on the software packaging that states it is illegal to make unauthorised copies of the software Licence agreements An agreement between the user and the vendor about the software use Dongle Piece of hardware plugged into a computer software cannot be used without it Product / serial / pass / access key A unique code entered by the user Online verification One from: Software is stored on the cloud User must log into a cloud account to use the program If the software is single use, then the second log in will not be allowed Watermarks / holograms These are placed on the packaging to show that the software is legal	6
